0.1 Context

0.2 Learned in this study

- Creating memories is relatively easy
- Retrieving memories is relatively easy
- Updating memories is hard (not achieved)
- Asking ChatGPT to forget prior statements is hard (not achieved)

0.3 Things to explore

1 Overview

2 Types of memories

- Conversational: The back and forth discussion between the user and the agent/LLM, recorded as a sequence of prompts and responses
- Entities: The entities that are discussed during the conversation, recorded as a set of entities and their relationships
